**Slimline Island Rangehood**

**Standard 2m Island Rangehood**

**1.5m Wall Mount Rangehood**

All BBQ and Domestic Rangehoods come complete with low voltage 50w halogen down lights, 50mm thick commercial grade honeycomb filters and are fully wired with three speed switch and twin motors with a maximum extraction rate of 2200 m3 per hour and a maximum decibel reading of 53dba.

**Roofing Kit for twin motor system only**

Rangehoods can be either manufactured wall or island mounted. They also can be supplied with rear flue kits to vent out through the back wall or vertical kits to extract through the roof. We also supply solid ducting for all installations, eliminating the use of flexi duct that could be a fire hazard.

A quieter alternative are roof mounted fans which are placed on the outside of the roof attached to the end of the rangehood flue which eliminates noise levels in the immediate cooking area and boosts suction. These roof fans can range from 2250 m3 per hour to 4000 m3 per hour and are variable speed. Roof fans and down lights are operated via a switch on the wall and will need to be connected by a qualified electrician.
